

Coir Products

Coir Round Pots

- Renewable alternative to plastic and peat pots with visibly better, faster plant growth
- Moisture is maintained in the soil
- Easily transplanted into ground after 2 months
- Sustainable resource that will not pull moisture away from the plant
- Higher resistance to mold
- Environmentally-friendly

Standard Pot Color

Coir Fiber

What is Coir?

Coir is the **outer husk of a coconut** consisting of both coir dust and coir fiber. A renewable resource, the husk is processed to make environmentally friendly products like biodegradable pots, planting medium, liners for hanging baskets, mulch and much more.

Coir is made from a natural renewable resource. The dimension on finished products may vary slightly from product to product.

For a complete list of Coir products, contact a sales representative.
