DILLEN® ADDS CO-EXTRUSION TO CAPABILITIES FOR COMPREHENSIVE PRODUCT OFFERING

FOR IMMEDIATE RELEASE: December 2, 2005 — Dillen Products, North America's leading designer and manufacturer of horticultural containers and trays, announces the addition of thermoformed, co-extruded polypropylene growing containers to its existing broad product line. Dillen will make the new product offering available to growers through its extensive North American distribution network in the second quarter of 2006.

According to Chuck Beck, general manager of Dillen, "Our investment in this additional manufacturing process and cost effective product offering perfectly complements our line of horticulture container and tray systems. The technology allows Dillen to provide growers a cost effective, lighter weight option to traditional injection-molded pots. Plus, developing this new container line to be compatible with our existing carry tray systems gives customers greater flexibility in choosing the Dillen container option that best fits their specific grower needs."

Dillen's new line of co-extruded round containers will include a wide variety of popular North American sizes. The black interior barrier helps to protect plant roots from light exposure for enhanced development. Containers feature smooth rims and stacking lugs to ensure accurate de-nesting and dispensing when used with high-speed equipment. Precision punched openings in the pot base provide excellent two-level drainage making the co-extruded containers perfect for use with flood floors, ebb-and-flood benches or installations with capillary mat irrigation.

Stock colors will be green, clay, gray and white with black interiors. Custom colors will be available with minimum quantity orders. Six-color offset printing and labeling options are available, plus assistance from Dillen's in-house graphic design and production team to create a stunning "package" for retail programs.

Dillen Products, a Myers Industries, Inc. company (NYSE: MYE), is a leading innovator and manufacturer of molded plastic growing containers, trays, and related products for the North American horticulture market. Dillen also provides in-house multi-color offset printing, inkjet printing, and adhesive labeling, plus complete graphics design services to meet the full scope of customers' merchandising needs. Custom product design is also available. Dillen products are manufactured in Ohio and Nevada, and are available across North America through Dillen's extensive distributor network. Call (800) 225-7712, or visit www.dillen.com to learn more.
